## Project Proposal

I will be attempting to build a personal finance helper website. It will have tips on what to do with your money and calculators that will help you determine how much you should save for retirement and how to do that.

The front page will be a retirement calculator, asking the user how much they will want to have saved when they retire and how old they are. Once submitted, the website will then calculate the results, showing them how much they need to save and/or invest per year and per month.

The images in the carousel on the front page will link to other webpages in addition to the horizontal menu.

The user will also be able to download a text file that contains the desired retirement amount and how much must be saved or invested monthly.

There will be a GET submission form at the bottom of the front page that will ask the user to review the website.

The subpages will contain different articles on personal finance. These pages will contain pictures and links to the external articles that were used as sources. Direct quotes will be contained in scrollable boxes. The unordered list will also be a part of one of these articles.
